

*For over a decade, we've sent our CAD operators and design engineers to the same ATC. Being in a classroom setting and having live instructors show our staff how to make the best use of Autodesk software has been a blessing.*

*Owning the right to use software is really a monetary investment. Getting trained by the caliber of these ATC instructors on how to use that software, however, is priceless.*

# Know more. Work better.

Having great tools is one thing. Knowing the best way to use them is another. The Autodesk Authorized Training Center (ATC®) program is a global network of professional training providers offering a broad range of learning resources.

Get high-level, up-to-date instruction on Autodesk software. In many areas, you can earn continuing education credits while building your toolset. Upgrade your skills on Autodesk products, and make sure you get the best return on your software investment.

## Hands-On

A great instructor. A quiet classroom. A computer dedicated to you, so that you're up to speed quickly — using sample projects and exercises that emphasize real-world, practical applications. This is the Autodesk Authorized Training Center (ATC) experience. It's the best way to learn how to use Autodesk products better or faster than before. At an ATC, you'll find the courses you need — in one place. ATCs teach a wide range of Autodesk products for users at all levels, and are up-to-date on the latest software releases. Hands-on training at your own classroom workstation reinforces what you learn.

## Convenient

Take classes according to your skill level, what your company requires, and the level of intensity that is right for you. ATCs offer flexible class schedules, including nights and weekends. We know your time is valuable — so most ATCs will provide offsite training upon request, and many will provide custom training at your location if that is more convenient for you. Your ATC manager will work with you to determine your specific business needs and tailor your training to meet them.

## First-Class

ATC instructors come from a wide range of fields. Many have backgrounds in architecture, design, drafting, government, or engineering. What they all have in common is a passion for professional training.

ATC instructors continually refresh their skills with product updates from Autodesk. They take advantage of Autodesk Official Training Courseware. Many attend and teach Autodesk University classes, AUGI® workshops, and other Autodesk training events. To ensure quality and consistency in the classroom, Autodesk sets rigorous standards for all ATC courses. When you attend an ATC class, you know the training will be first-rate.
